

On The Record™

York Telecom's Digital Recording Solution

Based on decades of experience in designing state of the art audio and visual communications solutions, York Telecom's **On The Record™** offers the best in digital archiving: multi-channel recording, selective search playback, and synchronized electronic annotation. Available in either a stationary or portable architecture, **On The Record** offers easy-to-use, surefire digital audio control at a competitive price.

On the Record's™ stationary architecture

On The Record is an easy-to-use, audio/video, stationary or portable recording solution that integrates the content from four microphones, two telephones and a videoconferencing system into one recording so participants at remote locations can participate in a recorded meeting or session as if they were all in the same room.

By including proven technologies such as TheRecord Reporter™ multimedia recording and play back solution, **On The Record** provides all the tools users need to capture audio and video proceedings easily and

TheRecord Player Interface

efficiently. Since TheRecord Reporter features familiar tape recorder-like controls, users can start enjoying the benefits of **On The Record** with little or no training. They can record four separate channels of digital media directly to a network at the touch of a button. They also have "point and click" control of the volume and speed of each channel, and can instantly access any part of the recorded media. **On The Record** is also compliant with U.S. Government accessibility requirements for disabled users (Section 508).

On The Record features include:

- ✓ Four channel digital recording
- ✓ Selective Search (Random Access) playback
- ✓ Full integration of two telephones into the system for recording and amplification of remotely-located participants.
- ✓ Videoconferencing integration into the system for recording and amplification
- ✓ Intuitive interface
- ✓ Visual display of each audio channel
- ✓ Auto-save capability to prevent information loss in the event of an equipment failure
- ✓ Robust indexing capabilities before, during, and after recording session
- ✓ Portable or stationary format
- ✓ Ability to pause/interrupt/stop recording
- ✓ "Confidence monitoring" feature ensures audio/video is being captured
- ✓ Ability to archive up to 8 recorded hours on a single 650 MB CD
- ✓ Light-weight travel pack allows easy set-up and all necessary equipment regardless of recording location.
- ✓ Includes four microphones, table-top mic stands, two speakers, dedicated laptop, and headphones in addition to recorder, playback and indexing hardware and software.

- ✓ Complete maintenance packages backed by York Telecom's National Support Center are available.

The **On The Record** portable system includes a carrying case, designed for air-line travel, meeting FAA size and weight restrictions.

On the Record's™ portable architecture

On the Record is pre-cabled using color-coded connectors for easy re-configuration should anything become disconnected. Setup requires only simple steps, such as connecting the mixer and headphones to the laptop, positioning the microphones and speakers, connecting to electrical power, and connecting to videoconferencing/telephone lines as desired.
